

Front-End UX Developer

SUMMARY

Front-end software developer driven by a passion for high quality engineering and captivating UI/UX. Creative, empathetic, innovative, and adaptable with a hard work ethic to consistently deliver above expectations. Frequently mentored, lead and collaborated with teams to develop results exceeding independent possibilities. Passionate about teamwork, communication, UX design methodologies, keeping up with emerging technology, all to engineer experiences that are both delightful and profitable. Adept to working independently or in collaborative settings. Excited to design the next world-changing product with an equally ambitious and creative team.

PROFESSIONAL EXPERIENCE

Founder, Operator, Manager, Marketer, Photographer

Nick Brimmer Photography | May 2014 — July 2020

- Launched a small business in college, gradually testing and incorporating new feedback and best practices. Eventually built into a profitable, productive and exciting full-time business.
- Managed and coordinated with venues, vendors, and family for at least 15 weddings every year. Organized and managed day-of wedding schedules to keep weddings professional, punctual and enjoyable.
- Regularly offered feedback to clients and vendors on industry practice, how to best manage difficult situations, and give the best experience.
- Extensively researched and exhaustively charted out an SEO, keywords, and content marketing plan that took my business to page two of the "Google local pack" for search results. This proved an exciting challenge with quickly changing industry best practices and Google requirements.
- Proved dependable, professional, reliable, empathetic, enthusiastic and enjoyable for the six years I ran my small business.

Front-end Developer (Intern)

Poached Jobs (PoachedJobs.com) | June 2020 — July 2020

- Maintaining, designing, developing and deploying features for Poached's staffing agency software.
- Responsibilities included updating and optimizing legacy code base. Participated in a full development lifecycle release.
- Listening and adapting to shareholder feedback, testing new features, and delivering desired result. Daily Agile standups, code reviews, weekly company meetings to correspond with staff and update team on the next development release.
- Technologies used include Ember.js (JavaScript MVC framework), local development on Node.js and Vagrant, deployment on AWS EC2, backend on Sails.js, merging and rebasing done on Github with Git, and production integration with Atlassian/Jira.
- Communicated and collaborated with senior engineers to execute tasks they wished to delegate.

Full Stack Software Developer (Student)

Alchemy Code Lab | August 2019 — March 2020

- Designed and developed over 40 web applications using JavaScript, Node.js, CSS, Express, MySQL, MongoDB, and React technologies.
- Collaborated with other student developers on group projects. Established strong best practice workflows using Github with groups.
- Regularly noted ability to communicate graciously, lead, and effectively resolve conflict in a professional manner.

Onboarding, Accreditation & Academic Advising

Enlightium Academy | May 2017 — Oct 2018

- Developed the school standard for researching and releasing accreditation information for families wanting to learn about online schooling.
- Closed 300 annual contracts for new students enrolling to the school. Patiently onboarded students, frequently overseeing their progress throughout the academic year, raising student retention and customer loyalty.

Cashier, Morning Produce

Costco Wholesale | March 2011 — July 2015
Co

Teacher's Assistant

MBI - Spokane | January 2012 — May 2013

- Lead over 500 students over a 1.5 year period in their education, helping them develop academic rigor and research skills.
- Coordinated lectures, grading, standards and course material for a single class of 400 students. Critiqued over 2,000 academic papers.
- Supported students in group and individual settings, offering class-wide and peer to peer tutoring sessions, showing technical examples of how to achieve improved results. Provided detailed feedback with opportunities to correspond and revise work for higher achievement.

SKILLS

Languages: JavaScript, TypeScript, HTML, CSS
